Eroding the Mind

Researchers have mapped brain decay caused by methamphetamine use. The damage affected memory, emotion and reward systems.

Average difference in brain tissue volume of methamphetamine users, as compared with non-users:

Adverse (negative) effects of Methamphetamine

Psychological

- Insomnia
- Aggressive behavior
- Paranoia
- Incessant conversations
- Decreased appetite
- Increased alertness
- Irritability
- Slurred speech
- Dizziness
- Confusion
- Hallucinations
- Obsessive behaviors
- Depression
- Panic attacks

Systemic

- Hypothermia
- Malnutrition
- Impaired immune system

Circulatory

- High blood pressure
- Vessel damage in brain
- Clotting and stroke

Heart

- Chest pain
- Rapid heart rate
- Heart attack

Liver

- Damage

Eyes

- Dilated pupils

Mouth

- Grinding of teeth

Skin

- Sweating
- Numbness

Respiratory

- Shortness of breath

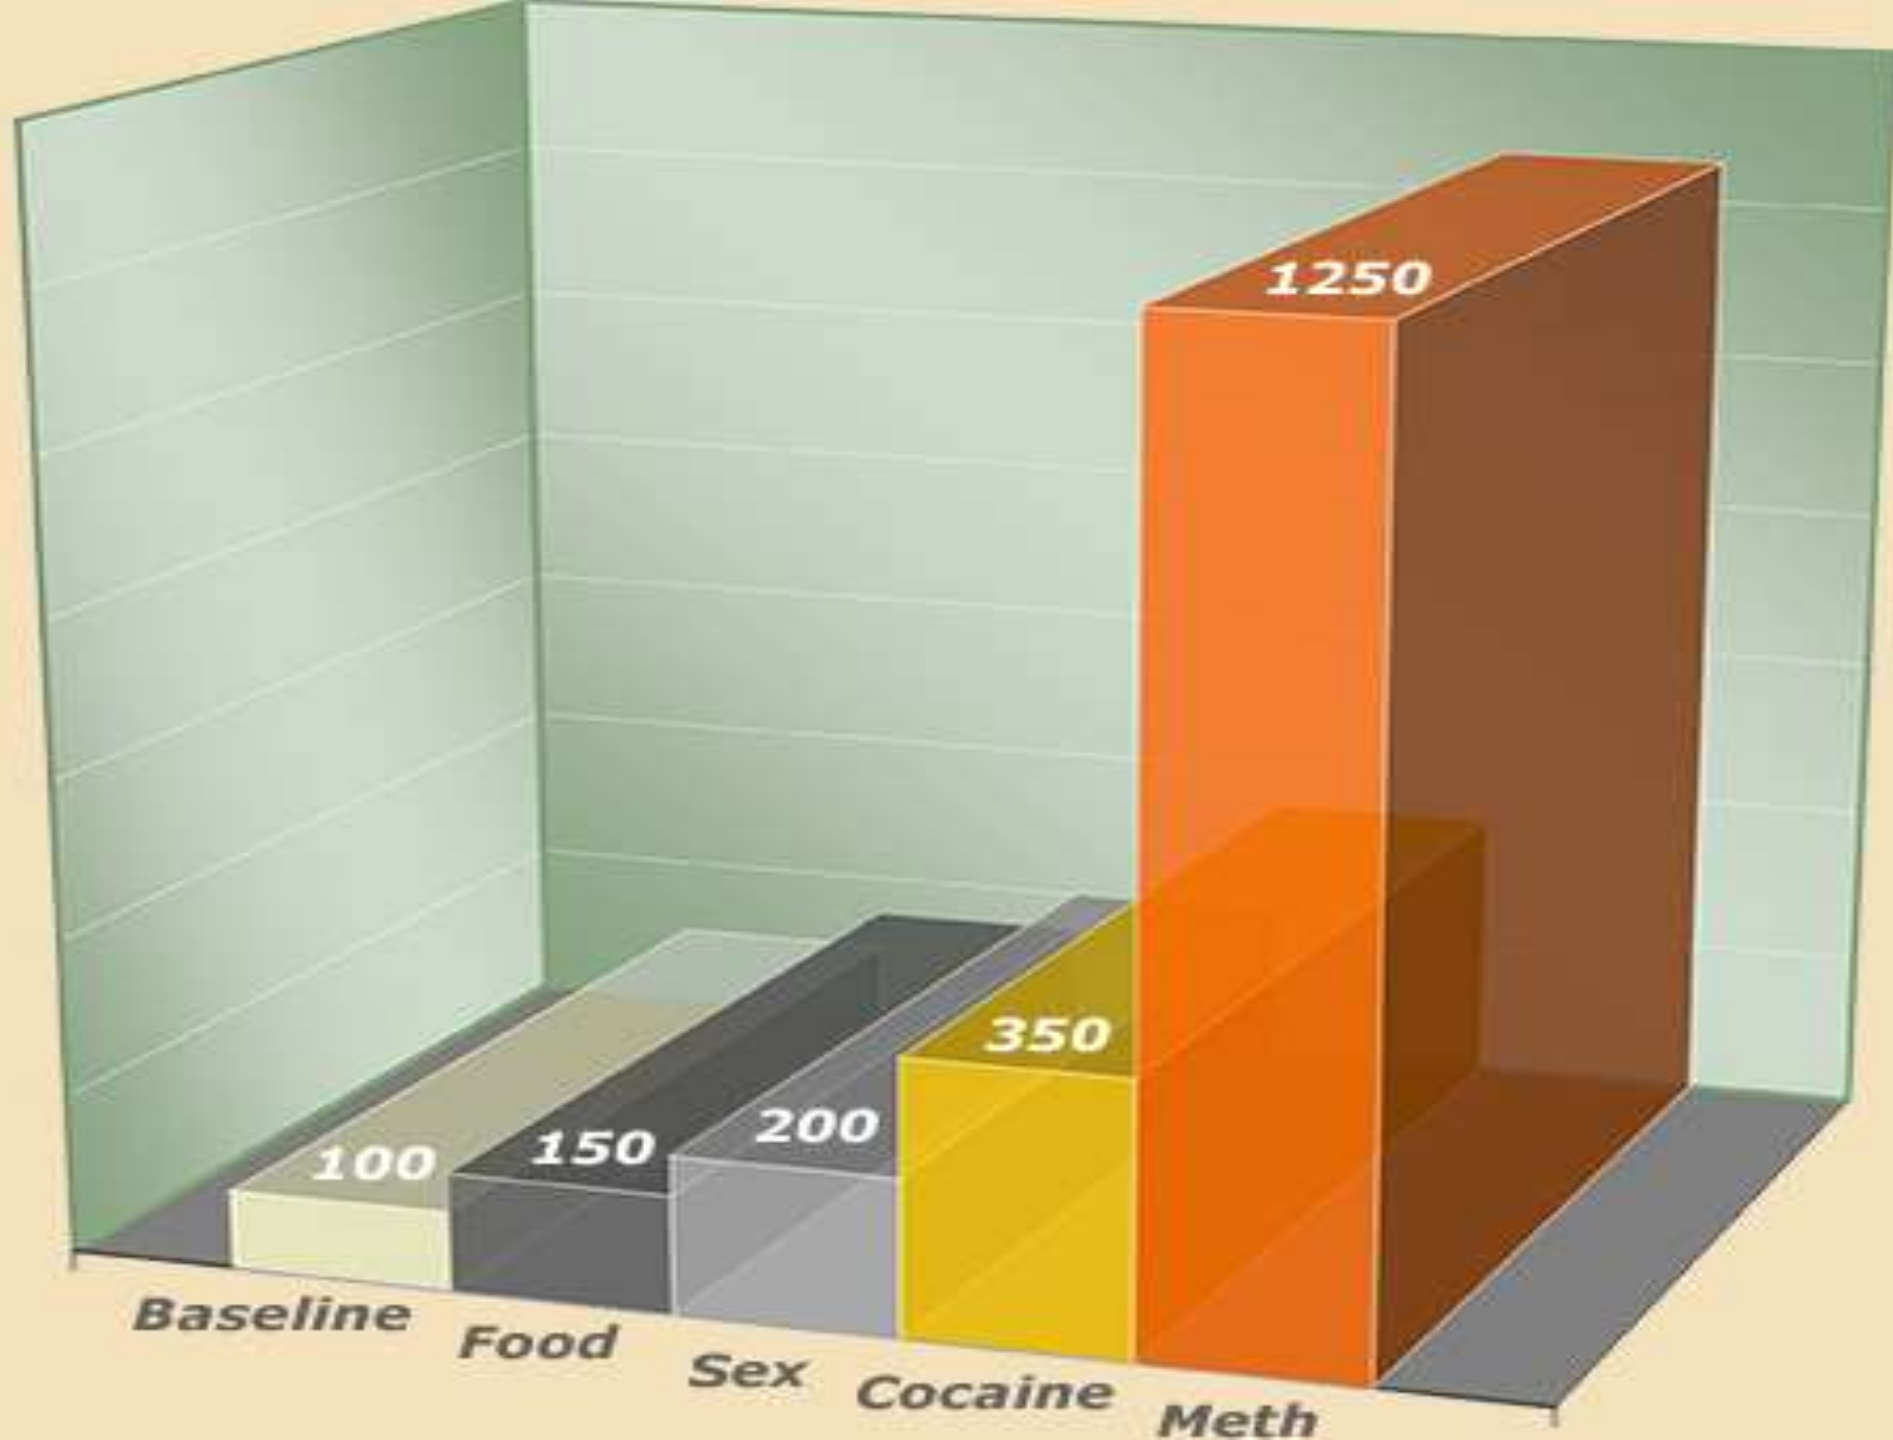

Muscular

- Jerky movements
- Increased activity
- Convulsions
- Loss of coordination

Kidneys

- Damage

WARNING

A photograph of a white garage door with red graffiti. The text is written in a crude, hand-painted style. The main text is arranged in two lines: "I DONT HAVE A" and "METH LAB (NEVER EVER)". Below this, in a smaller font, is the phrase "LEAVE ME ALONE". The garage door is set into a light-colored wall, and a dark roofline is visible above it. To the right of the door, there is a dark, leafy bush or small tree.

I DONT HAVE A
METH LAB (NEVER EVER)
LEAVE ME ALONE

CRY2

THIS IS NOT NORMAL
BUT ON METH, IT IS

METH

NOT EVEN ONCE
